Professional Summary

Full Stack Developer with 02 to 03 years of experience turning real business needs into reliable, scalable web applications and custom software using React, Node.js, TypeScript, MongoDB, and PostgreSQL. Skilled in building user-focused interfaces, clean and maintainable architectures, secure APIs, optimized databases, and high-performance systems. Experienced in system design, deployment, monitoring, and collaborating with clients and teams to deliver software that creates real business value.

Technical Skills

Frontend: HTML5, CSS3, JavaScript (ES6+), TypeScript, React, Next.js, Redux, Zustand, TenStack Query and Architecture.

Backend & APIs: Node.js, Express.js, Rest APIs, Authentication & Authorization, API Security, WebSockets, File Uploads.

Database & Architecture: PostgreSQL, MongoDB, Prisma, Redis, Database and system design, scaling and management.

DevOps and Tools: Docker, Linux, Nginx, PM2, Git, CI/CD, Github Actions, Postman, AWS and Monitor with Sentry.

Work Experience

January 2024 - June 2026

Full Stack Developer - Nexora Soft Tech

- Translated client requirements into solutions covering architecture, database design, API planning, security and scope.
- Built 10+ production-ready applications with secure APIs, responsive UIs, and scalable architecture for teams.
- Improved performance by **30 percent** through query optimization, caching, lazy loading, and efficient UI rendering.
- Managed delivery from requirements through testing, deployment, logging, monitoring, and production support.
- Reduced development time by **25%** through reusable components, modular architecture, clean code, and workflows.
- Worked in **Agile teams** using Jira for sprint planning, task tracking, progress updates, and collaborative delivery.

Projects

Stream Doing - [Live](#) | [GitHub](#)

March 2026 - Jun 2026

- Built a multi domain live streaming management system with dedicated Admin, Host, Master, Coin, and Support portals.
- Implemented role-based access, resource isolation, and WebSocket-powered real-time management across portals.
- Deployed on DigitalOcean VPS with SSL, CI/CD, logging, monitoring for production debugging, maintenance, and scaling.

Titto Live - [Live](#) | [GitHub](#)

Nov 2025 - Jan 2026

- Developed custom admin platform to sell coins, manage agencies, transactions, track revenue, and send gifts in real time.
- Architected the frontend with feature-based and backend with layered using React, Node.js, MongoDB Atlas and Redis.
- Integrated rate limiting, CORS, caching, background jobs to improve security, performance, and production stability.

Hotel Management System - [Live](#) | [GitHub](#)

May 2024 - July 2025

- Built a system with room management, date-based availability, booking, payments, and promo-code discounts for users.
- Optimized image size, quality using background processing and stored assets on Cloudinary for faster performance.
- An admin dashboard with PostgreSQL & RBAC, separating user & admin permissions to protect data and manage access.

Additional Background

Started from zero programming knowledge and became a production ready Full Stack Developer through self-learning, dedication, and consistency. Today, I provide large scale software solutions & deliver services for real world business needs.
